### **GD-080-PHS-EMS:** Drug Profile for Vasopressin

This is the Arizona Department of Health Services' recommendation for the use of this drug in the prehospital setting.

GENERIC NAME: VASOPRESSIN

**CLASS:** pituitary (antidiuretic) hormone

### Mechanism of Action:

Causes vasoconstriction (pressor effect) of peripheral, cerebral, pulmonary, and coronary vessels

### Indications and Field Use:

Adult shock-refractory ventricular fibrillation/pulseless ventricular tachycardia

# **Contraindications:**

- Responsive patient with coronary artery disease
- Hypertension

# Adverse Reactions:

- Can increase peripheral vascular resistance and provoke cardiac ischemia and angina pectoris
- Abdominal distress
- Nausea and vomiting
- Tremors
- Tissue necrosis if extravasation occurs

### NOTES ON ADMINISTRATION

### <u>Incompatibilities/Drug Interactions:</u>

None in the emergency setting

# Adult Dosage:

For ventricular fibrillation/pulseless ventricular tachycardia: 40 U, one time only prior to administration of epinephrine

### Routes of Administration:

IV, IO, ET
